

Case Study Design for Company Projects

I worked on designing multiple case studies for company projects, focusing on visually appealing and functional presentations. My role included preparing engaging screens, creating animations, and structuring the case studies to highlight key features of each project.

Process

Collaborating with the Designer:

- Coordinated with the primary designer to understand the project’s key functionality and purpose.
- Discussed which screens and animations best represent the functionality and user experience.

Selecting Content:

- Chose visually rich and content-heavy screens to showcase important elements of the project.
- Created custom mockups to enhance the visual appeal and presentation.

Case Study Development:

- Used provided text to structure a clear and engaging story for the case study.
- Integrated animations to emphasize interesting or unique functionalities of the product.
- Designed an overall cohesive visual flow for each case study.

Result

The completed case studies effectively highlighted the functionality and design of the projects, providing a professional and visually compelling presentation. The use of animations and custom mockups made the content dynamic and engaging, attracting attention and showcasing the company’s capabilities.
