

Dmytro Chyzh.

UX/UI | Product Designer

I am an AI Design Engineer & Product Designer with 3+ years of experience in creating user-centered digital products. I bridge the gap between design and development by leveraging advanced AI tools and frontend technologies to build high-fidelity interactive prototypes, dynamic web components, and production-ready layouts.

My expertise spans across designing comprehensive design systems in Figma and translating them into functional web interfaces using modern AI-driven workflows (Cursor, v0, Claude). I focus on delivering scalable, high-contrast, and minimalist user experiences that effectively align user needs with business goals.

- AI-Driven Development: Building and deploying interactive layouts, dynamic sites, and custom components using v0, Cursor, and HTML/CSS.
- Advanced Prototyping: Designing scalable design systems, interactive elements, and micro-animations in Figma to bring complex ideas to life.
- Product Strategy: Conducting user research and information architecture mapping to transform complex business requirements into clean, user-friendly UI/UX solutions.
